

RailSys® Software Suite - Overview

Applications

Infrastructure Manager

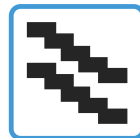

Construction Manager

Train Path Manager

Service Manager

Timetable Manager

Operations Control Center

RailSys® BI/ Data Evaluation

Database and Interfaces

Functions

Editing the digital twin

Creating operational documents

Access planning

Managing rolling stock

Ecologically optimized driving

Building timetables

Optimizing capacities

Timetable simulation

Circulation planning

Accounting train path usage & Service Assets

Server-based working

Managing construction sites

Managing disposition

Process-oriented working

Sharing information

Determining key parameters

Coordinating timetables

Optimizing driving modes

Collaborative planning

ETCS optimization
